REPORT LIBRARY

## Flexible reporting tools for detailed account analysis

Overview

CertCentral Report Library is a suite of tools that enables organizations to generate reports on certificate usage, account balance, order status, validation status, and department.

Report Library provides robust and highly flexible features for building and analyzing data sets, archiving information, and scheduling the timing and frequency of reports so that administrators always have the data they need to make informed business decisions.

Granular self-service reporting

Step-by-step wizard effortlessly guides users through the creation of custom reports.

Report Library is available to CertCentral Enterprise and Partner accounts and supports 11 languages (English, German, Spanish, French, Italian, Japanese, Korean, Netherlands, Russian, Chinese, and simplified Chinese).

Preconfigured Templates

A rich set of preconfigured report templates can be used to generate reports or serve as a starting point for further customization.

Orders – Includes data from all orders you have access to including purchase history.

Balance History – Shows account balances and tracks spend.

FQDN – Monitors total FQDN and wildcard usage.

Domains – Shows each domain's validation status, number of certificates associated with the domain, and DCV method.

Audit Log – Tracks every action taken in your account for a set period in one report.

Organizations – Generates data on organization details such as address, account ID, contact emails, and validation details such as OV and EV organizational expiration dates.

Rich Customization Options

Data filters enable fine-grained selection of data to be included in each report. Every data object that CertCentral collects can be included or excluded.

Scheduled Delivery

Reports can be scheduled for preset frequencies (e.g., one-time, weekly, monthly) and formats (e.g., JSON, PDF, CSV) to dependably deliver data when and how it is needed.
