

# DIGICERT® EMBEDDED SOLUTIONS PARTNER PROGRAM

## Secure Software Manager

Bring market-leading code security, trust, and signing automation into your customer's workflows. DigiCert Secure Software Manager helps programmers, engineers, and DevOps teams implement easy-to-use and secure code-signing, with the ability for extensive automation. Embedding Secure Software Manager in your solutions can help your customers to:

- Identify who signs what, and when they sign it
- Sign with secure keys, and maintain compliance
- Sign apps faster, more easily and on more platforms

Secure Software Manager capabilities can be embedded and integrated into many technology solutions, including:

- Mobile app code signing & security solutions
- DevOps automation & orchestration solutions
- Infrastructure-as-code solutions
- CI/CD platforms
- DevOps telemetry and logging solutions
- DevOps monitoring & security solutions
- DevOps test, release & deployment solutions

### ABOUT DIGICERT

The better way can’t become common practice until someone finds it.

At DigiCert, building a better way to secure the internet is the single-minded pursuit that goes all the way back to our roots. That’s why our TLS/SSL certificates are trusted everywhere, millions of times every day by 89% of the Fortune 500, 97 of the 100 top global banks, and for 81% of global e-commerce. It’s why our customers consistently award us the most five-star service and support reviews in the industry. It’s why we’re modernizing PKI by building the DigiCert ONE platform and management tools to help enterprises and governments secure identities, access, servers, networks, email, code, signatures, documents and IoT devices. In SSL, IoT, PKI, and beyond—DigiCert is the uncommon denominator.
