

5G

5G has captured the world by storm and we're no exception! It's technology promises next-generation speeds and capabilities, and while that technology isn't currently widely available, some experts predict that 5G will cover 40% of the world by 2024 and 25% of all mobile traffic data. However, to make 5G available and safe, Mobile Network Operators (MNOs) will need to overcome security challenges and transformation hurdles that didn't exist for 4G and earlier technologies. If 5G is not secure, we lose many of the benefits it has to offer!
