

# Code signing/Blog

#Codesigning certificates ensure that code cannot be tampered with and they prevent #malicious tampering with code to protect end-users.

Similarly, TLS/SSL #certificates establish an #encrypted connection between a browser or user's #computer and a server or #website to protect end-users. However, they are not the same thing and cannot be used interchangeably. For everything you need to know about code signing TLS/SSL certificates, follow the link.
