

DigiCert Managed PKI Now Available

Enterprise-Level SSL Certificate Accounts

Managed PKI (Public Key Infrastructure) is a service that allows organizations with a large number of SSL certificates to take control of certificate management -- including issuing new certificates and reissuing, replacing, and revoking existing SSL certificates -- on demand.

DigiCert's managed PKI service also provides administrators with advanced administrative and account auditing features that are not available in the standard customer account area.

Managed Public Key Infrastructure customers enjoy all the benefits of being a DigiCert customer -- top-notch support, flexible features, and low prices -- while being in control of their own SSL certificate needs.

Our development team has been working in conjunction with some of our PKI trial customers (thanks for all the help and feedback!) for several months

to fine tune the account features, and we are happy to announce the full release of Managed PKI.

Who Should Consider M-PKI?

Is DigiCert's Managed PKI Right For You?

Your organization and technical structure will help you determine if managed PKI is right for you.

If you manage a large number of certificates per domain, multiple domains per company, or if your users or their certificate requests require administrative oversight, managed PKI is probably right for you.

However, some customers requiring a large volume of SSL certificates might not necessarily want to consider Managed PKI. For example, a hosting provider who has many clients each with one domain and one certificate will probably not receive the same benefits as a large university with only a few domains but many certificates per domain, or a large company overseeing certificate management throughout the organization.

Examples of ideal Enterprise PKI customers are universities, government entities, and large corporations.

Find out if Enterprise Managed PKI is right for you at <http://www.digicert.com/pki-solutions.htm>.

How Much Does M-PKI Cost?

Are Volume Discounts Available?

Since Managed PKI is a service - a different method of account management - there are no costs directly related to setting up an MPKI account.

While there are no automatic discounts for using MPKI, the types of organizations best suited for MPKI are more likely to be eligible for our standard bulk discounts. Just give us a call and we'll work with you to make sure you get the best pricing possible.

The main benefits you will notice from using MPKI are time savings (reduced certificate issuance time) and advanced user and certificate management functions.

Learn more about the costs of Managed PKI at <http://www.digicert.com/ssl-mpki-management.htm>.

M-PKI Benefits

By: Travis Tidball, Vice
President of Sales & Marketing

If your organization manages a large number of certificates, DigiCert's M-PKI platform will revolutionize the way you manage them.

Here is an at-a-glance review of DigiCert MPKI benefits:

- Approve, Reissue, and Revoke certificates on-the-fly
- Sub-accounts allow you to distribute workload while controlling permissions
- Immediate access to advanced reporting features.
- Account credit never expires. No need to worry about using up certificate units in an arbitrary timeframe!
- Volume discounts for certificates on the same domain.
- Flexibility. DigiCert will never lock you in to a lengthy contract.
