

DigiCert Renews WebTrust Extended Validation Certification

DigiCert exceeds criteria for WebTrust Audit

DigiCert, Inc. has completed the 2010 WebTrust Extended Validation (EV) audit for SSL Certificate Authorities (CAs). This rigorous evaluation, completed by KPMG, verifies the quality and effectiveness of authentication services provided by DigiCert to ensure confidence in e-commerce transactions.

Consumers need assurance that their information is protected in online communications. DigiCert's SSL certificates provide that assurance by protecting sensitive information from outside parties. WebTrust certification verifies that DigiCert's strong security controls are in place and its SSL standards are strictly followed when issuing certificates.

WebTrust is an independent auditing body whose standards address consumer concerns about online privacy and security. Authorized public accounting firms, such as KPMG, complete the WebTrust audit and grant WebTrust certification when compliance with these standards is verified.

All DigiCert certificates are validated with a high level of security, beyond domain-only validation. This dedication to stringent authentication practices has given DigiCert a proven track record of successfully issuing certificates to legitimate entities. For

more information on DigiCert's authentication procedures, visit www.digicert.com/authentication-encryption.htm.

Become a fan on Facebook!

DigiCert is on Facebook! Help us start an online community based around the DigiCert values of unbeatable security and great customer support. Joining the DigiCert fan page is a good way to be involved with a community of peers in addition to getting the latest updates on DigiCert events and promotions, including: Night at the Movies, fan contests, and t-shirt giveaways.

Automated Certificate Checker

New tool confirms certificate installations

After a DigiCert certificate is purchased and installed, our new certificate checker tool is run automatically to ensure the certificate is functioning properly. DigiCert strives to provide the best value and support for our customers, so we reach out to identify potential issues that might occur.

The day after certificate installation is complete,

the certificate checker tool runs diagnostic tests on the server name that the certificate is issued to. If any problems are identified, DigiCert will contact you with an explanation of the error and how to resolve it.

If you are worried about your current SSL certificate installation, you can check its validity through our manual certificate checker tool,

available at www.digicert.com/help.

As always, our support team is readily available and willing to help correct any issues you might be experiencing. Contact us toll-free at 800-896-7973 or send an email to support@digicert.com.

Support Tools

[OpenSSL CSR Creation Tool](#)

The fastest way to create your CSR for Apache or any platform using OpenSSL. Fill in your relevant details to generate your customized OpenSSL command.

[Exchange 2010 CSR Creation Tool](#)

The fastest way to make your CSR for Exchange 2010. Fill in your relevant details to generate your CSR command.

[SSL Certificate Installation Checker](#)

Check to confirm proper function of certificates issued by any certificate authority. Enter the name of your server to verify proper SSL installation.

[SSL Certificate Management & Troubleshooting Tool](#)

View all SSL certificates in one central location for easy management and troubleshooting, all without having to open up a cmd prompt or dig through the MMC Certificate Snap-in.
