

## DigiCert's EV Wildcard Alternative

### EV Upgrade for Wildcard Plus SSL Certificates

With DigiCert's new [Extended Validation \(EV\) Wildcard](#) alternative organizations can EV-secure their entire domain with a bundle of 3, 10, or 25 EV SSL certificates, similar to how they would with a traditional wildcard SSL certificate.

Standard EV SSL certificates can only secure a single name but the new EV Wildcard alternative

from DigiCert allows server administrators to install multiple EV SSL certificates across their domain. This new product is the most affordable option available today to secure your entire domain with EV SSL.

The bundles are available in either 1- or 2-year term lengths. All of the certificates in the bundle are issued within the same base domain and share the same expiration date. The certificates can either be installed all at once or as needed during the term lifetime.

Since EV is the new standard for web security, DigiCert wants to make it accessible and affordable

for those who require it. For questions, comments, or feedback about the EV Wildcard alternative, please contact the support team by phone at 1-800-896-7976 or by email at [support@digicert.com](mailto:support@digicert.com).

## Become a fan on Facebook!

DigiCert is on Facebook! Help us start an online community based around the DigiCert values of unbeatable security and great customer support. Joining the DigiCert fan page is a good way to be involved with a community of peers in addition to getting the latest updates on DigiCert events and promotions, including: Night at the Movies, fan contests, and t-shirt giveaways.

You can become a fan by clicking on the image to the right or searching for DigiCert's page once logged into your Facebook account.

# EV SSL Certificate Upgrades

## EV Upgrades Available for All Certificates

DigiCert now offers EV upgrade bundle options for all SSL certificates. Here's how they work for Unified Communications (UC) and SSL Plus certificates:

**[UC EV SSL Certificates](#):** Our UC EV SSL certificates empower you to EV secure multiple domains with one SSL certificate. We include one fully qualified domain name (FQDN) with each certificate but additional names can be purchased at any time during the 1- or 2-year lifetime of the certificate.

**[EV SSL Plus Certificates](#):** When customers upgrade a single SSL certificate to EV, we actually include two more EV certificates at no additional cost. They must be issued within one base domain and they share the same expiration date, available in 1- or 2-year term lengths.

For questions and comments about our EV bundle upgrades or SSL certificates, please send an email to [support@digicert.com](mailto:support@digicert.com) or call our support team by phone at 1-800-896-7976.

Wildcard Plus Secure Unlimited Subdomains	Unified Communications Secure Multiple Domains	SSL Plus Secure a Single Common Name
<b>As low as \$475 per year</b> Use SANs for greater mobile compatibility - Reduce cost & simplify cert management.	<b>As low as \$262 per year</b> SAN Certs for Exchange & OCS - Secure up to 150 names in a single certificate.	<b>As low as \$115 per year</b> 2048-bit Strength - Secure an entire domain with and without the "www."

## DigiCert Holiday Giveaway

### Give the Gift of Encryption to Your Friends

In the spirit of the holidays, DigiCert is giving you the chance to share the gift of encryption with your friends. All you need to do is go to [www.digicert.com/share](http://www.digicert.com/share), log in with your DigiCert account information, and then enter in the email addresses of your friends that you would like to share a free certificate with. Thanks for being a great customer, have a wonderful holiday season!

## New Managed PKI Features

We are excited to announce two new features for our Managed Public Key Infrastructure (PKI) customers:

### [Additional User Types](#)

- [Finance](#) - Users have access to the financial account management functions
- [Unit Administrators](#) - Admins for each Business Unit who can approve certificate requests for their specific unit

### [Request Approval Rules](#)

Under MPKI Tools, customers can now create custom approval rules to help automate certificate requests. These rules allow users to auto approve requests based on specified criteria and also limit Business Units to only request certificates tied to certain subdomains.

These new features are aimed to help simplify certificate management through the Managed PKI system. For any questions about Managed PKI, please send an email to [enterprise@digicert.com](mailto:enterprise@digicert.com).
